

CALFGRO™ MILLPACK PREMIX

PRODUCT INFORMATION

VITAMIN AND MINERAL PREMIX FOR CALVES

INDICATIONS

CALFGRO™ MILLPACK PREMIX is a specially formulated premix for addition to calf starter and weaner feeds to aid in the prevention of vitamin and mineral deficiencies.

COMPOSITION

Each 1kg contains:

Retinyl acetate (Vitamin A)	2.0 MIU
Cholecalciferol (Vitamin D ₃)	0.200MIU
dl-alpha-tocopheryl acetate (Vitamin E)	50g
Microvit Vitamin K ₃	1g
Thiamine mononitrate (Vitamin B ₁)	5g
Riboflavin (Vitamin B ₂)	5g
Pyridoxine hydrochloride (Vitamin B ₆)	2g
Cyanocobalamin (Vitamin B ₁₂)	30mg
Biotin	100mg
D-calcium pantothenate	15g
Folic Acid	300mg
Niacin	20g
Cobalt (Co) as Cobalt sulphate	110mg
Copper (Cu) as Copper sulphate	11g
Ferrous Iron (Fe ⁺⁺) as Ferrous Sulphate	55g
Iodine (I) as Potassium iodide	280mg
Manganese (Mn) as Manganous oxide	44g
Selenium (Se) as Sodium selenite	300mg
Zinc (Zn) as Zinc Sulphate	45g

Carrier: Prebase™

(The above active constituents are guaranteed minimum levels)

DIRECTIONS

In complete feeds

Thoroughly mix **1 kg of CALFGRO™ MILLPACK PREMIX** per 1 tonne of complete feed. To ensure even dispersion of the premix in the total ration it is recommended that each kg of premix be first blended with 4 kg of feed. This blend should then be added to the mixer after the concentrates and before high moisture products and then thoroughly mixed.

CALFGRO™ MILLPACK PREMIX is suitable for calves up to the age of 12 to 16 weeks.

In loose mixes

Calves up to 200kg liveweight require 3 grams of Calfgro per head per day. If 200 grams of loose mix supplement is required per day, the addition of 15kg of Calfgro Millpack is required to be incorporated into the loose mix to achieve this level, per head per day.

DISCUSSION

CALFGRO™ MILLPACK PREMIX is a high quality vitamin and mineral premix for supplementation of calf diets. CALFGRO™ MILLPACK PREMIX contains fat-soluble vitamins A, D₃ and E and these will assist with general health, productivity and aid in the prevention of stress-related disorders associated with deficiencies of vitamin and minerals in the growing calf. B group vitamins are also included to help meet the requirements of the developing rumen until it is fully developed.
