

DOT 25% Premix Anticoccidial for Feed Medication

Description

DOT 25% premix is formulated to aid in the prevention of caecal and intestinal coccidiosis in broilers, replacement pullets and turkeys. It is a chemical anticoccidial that acts late in the life cycle of the coccidia and, accordingly, has the potential to allow the bird to develop some degree of natural immunity against the coccidia. For this reason it is well suited for use in layer pullets and rearing broiler breeders.

Composition

Each 1 kg contains:

DINITRO-O-Toluamide (DOT)

APVMA Approval

40704

Directions

Thoroughly mix indicated quantities of DOT 25% Premix as per specific diet to 1 ton of mixed feed.

Pullets	500 g
---------	-------

Broilers	600 g
----------	-------

Turkeys	750 g
---------	-------

To ensure even distribution of premix in finished feed, mix the required amount of premix with approximately 8 kg of feed before then add this blend to the rest of the feed ration.

Withholding Period

Meat: Nil

Eggs: Do not use in laying hens or in replacement pullets over 14 weeks of age

Storage

Store below 30°C (room temperature) in a dry place. Store away from direct sunlight.

Expiry After Manufacture

12 months

Pack Sizes

10 kg
